

Team on the Run Changes the Game in the Fleet Management Industry by Offering All-in-One Innovative Fleet Management Software + Full Business Mobile Communication Suite

Team on the Run (TOTR), the popular all-in-one mobile business solution, announced today the addition of advanced Geolocation Features. This technology allows Dispatch Managers to locate fleet members closest to a given address on a map, and establish secure and instant contact directly from the mobile control panel for maximum efficiency.

The Team on the Run SaaS service, available at www.teamontherun.com, provides tools designed to ensure the smooth operation of any organization, and with these new fleet management features it is especially ideal for public or private, big or small, transportation companies - or any organization with a fleet of vehicles or any kind of deployed agents.

The Team on the Run SaaS solution is easy to deploy and does not require long, complex and expensive installation on your vehicles. Team on the Run's Private Web Portal now doubles as a Mobile Dispatch Center that, when enabled, allows managers to:

Locate and Track fleet members on the map On-Demand

Dispatch the closest vehicles to a given address

Call, Walkie-Talkie, Push-to-Talk or send text messages directly from control panel to agents

Create reports and retrieve vehicle location history

NFC-Tag vehicles and mobile devices to identify agents on the control panel

"When we receive a request for a car, I quickly locate the closest available driver and contact him immediately through the Team on the Run mobile dispatch center. Customers wait less and I have seen a reduction in the gas expenditure of my fleet." - explains local town car business owner.

In addition to Geolocation services, Team on the Run users benefit from premium communication features and advantages over competing products such as:

VoIP Calls

Secure Multimedia Messaging

Easy, quick installation process and no hidden fees

Mobile Corporate Directory from which to contact drivers directly

Addition of new mobile devices and vehicles to the fleet within minutes

Instant identification and link between vehicle and driver on control panel
